

Automatic garage doors - 5 simple checks

Check now Automatic garage door openers for your garage door. Check if a garage door opener can easily be fitted.

Spend a few minutes measuring the site to ensure that the automatic garage door unit you choose is the right one for you, will do the job, and give you a lifetime service.

Power A 13 amp socket (240v mains) is sufficient for this purpose and, should it be necessary to add one to the ring main, it is one of the least costly jobs an expert will do.

Let's keep this simple. At this stage we go for two measurements and a few observations.

Clearance height. Measure the distance between the ceiling and the highest point of the door when it is starting to open - that is just after it starts to lean backwards into the garage.

Length available. The boom of the garage door opener occupies the space shown in blue.

Observe. This type of door should, if properly adjusted pivot naturally at about one third to halfway open. Does it? **Needs to be YES**

Is the **movement** smooth in opening and closing? **Needs to be YES**

Is the movement free of any binding, catching, scraping or jamming when the door is used?
Needs to be YES

What material is the construction of the front wall of the garage - directly above the garage door. Now you have enough information to be able to e-mail the information and buy your garage door opener now automatic garage door.

Because that's the FIRST STEP in fitting your automatic garage door.

About Somfy

Somfy is a market leading company supplying motor and control systems for lifestyle enhancement solutions for the home. This includes awnings, blinds, roller shutters, garage doors and gates.

What is Home Motion?

Technology is part of our daily lives. Today, the comfort of climate control for the car, Mobile Internet and Interactive TV have become a standard.

So how about home automation?

Stand alone electronic appliances, such as programmable washing machines and dishwashers, remote control garage doors and heating systems are increasingly appreciated by consumers.

Home motion goes further...

Automation of all openings in the home...
to increase the comfort, security and enjoyment of daily life.

Openings:

Windows - doors - gates

Automation:

Motors and controls which interact with the environment, with each other and of course with the user.

Exxxtra

comfort and convenience at the touch of a button ...

Let your Somfy garage door operator do the work for you!

It's the end of a hard day at work. It's dark, raining and the last thing you want to do is get out of the car to unlock the garage door.

In future, simply leave the door opening to Dexxo Pro garage door operators from Somfy, which automatically control the up and down movement by a button or remote control. Glide up the driveway, operate your control and drive into the garage safely and securely.

An additional benefit is Dexxo Pro's integral light, which activates as soon as you operate your door. Now you'll never have to enter the garage in the dark again!

Relaxx

knowing your system is safe ...

Safe, secure and reliable

We use our garages more and more in a variety of different ways – to park our vehicles, use them as workshops, offices or a utility, store our possessions ...

That's why safety is a prime concern when choosing to automate your door. Whether it's the kids playing in the drive or a garden tool left under the door, your garage door operator must ensure that the movement of the door is completely safe.

Dexxo Pro is safe*. The intelligent safety system continually monitors the up and down door movement and stops if an obstacle is detected.

CE *Dexxo Pro conforms to all European safety standards.

expectation with an operator that offers more ...

The versatile operator that offer more

Choose Dexxo Pro from Somfy and you have an operator that can be adapted to automate up & over, sectional and swing garage doors.

With Dexxo Pro, the automatic door operation can be tailored to your requirements, so you can select the closing speed or the delay time for the integral light, request a venting position* or have a security light connected for additional comfort.

Don't forget the accessories! Add a battery back-up pack to safeguard against power cuts, radio keypad for secure control or photobeams for additional safety.

* The venting position is a pre-programmed function that allows the user to partially open the door to a set height for ventilation. The partial opening height is defined during installation.
